FOR LEED® and WELL CERTIFICATION

WHAT IS LEED®

LEED (Leadership in Energy and Environmental Design) is the most widely used green building rating system in the world. Available for virtually all building types, LEED provides a framework for healthy, highly efficient, and cost-saving green buildings. LEED certification is a globally recognized symbol of sustainability achievement and leadership. LEED is for all building types and all building phases including new construction, interior fit outs, operations and maintenance and core and shell.

WHAT IS WELL®

The WELL Building Standard® is a performance-based system for measuring, certifying, and monitoring features of the built environment that impact human health and wellbeing, through air, water, nourishment, light, fitness, comfort, and mind.

WELL is managed and administered by the International WELL Building Institute (IWBI), a public benefit corporation whose mission is to improve human health and wellbeing through the built environment.

WHAT IS WELL HEALTH- SAFETY®

WELL Health-Safety Rating for Facility Operations and Management helps buildings and organizations address the health, safety and well-being of their most valuable asset —people. A visible indication of confidence and trust, the WELL Health-Safety seal communicates to everyone entering a space that evidence-based measures have been adopted and third-party verified.

In other words, the WELL seal outside means you can feel safer inside.
